1 SUMMARY

Meeting:	Customer Insights (Marketing) Workshop		
Date:	30th September 2026	**Time:**	06.00 AM – 09.00 AM PST
Meeting Facilitator:	UST Team	**Place:**	Microsoft Teams
Meeting Objective:	1) Review Dynamics 365 Customer Insights (Marketing) capabilities and applicability for HeartStream. 2) Understand current marketing processes, customer insight sources, and campaign management practices. 3) Identify marketing data sources, segmentation requirements, and customer/distributor profiling needs. 4) Discuss content governance, asset management, approval processes, and campaign readiness requirements. 5) Understand reporting, KPI, consent management, and marketing performance measurement needs. 6) Capture requirements, gaps, assumptions, and follow-up actions for future-state marketing capabilities.		

HeartStream Participants: James Casella, Brian Arbanas, Mattias Jarnstrom, Kaitie Carrigan, Rajeev Dhorajiwala and other business representatives

UST Participants: CRM, Marketing, Integration, Data, Architecture, QA and Program representatives

2 KEY DISCUSSION POINTS

Sr	Topic	Discussion Summary
1	Workshop scope and stakeholder alignment	• HeartStream highlighted that the workshop title created confusion, resulting in key marketing stakeholders not attending the session. • It was agreed that future workshop titles and communications should clearly identify Marketing / Customer Insights topics to ensure appropriate stakeholder participation. • HeartStream indicated that additional regional and global marketing representatives may need to participate in future sessions covering marketing capabilities and processes.
2	Dynamics 365 Customer Insights capabilities	• UST demonstrated Dynamics 365 Customer Insights capabilities, including data ingestion, profile unification, segmentation, marketing journeys and campaign execution.

		• HeartStream acknowledged the potential value of leveraging unified customer and partner data to support targeted marketing initiatives. • It was agreed that Customer Insights could act as a key enabler for future segmentation, campaign management and marketing analytics requirements.
3	Customer and partner profile requirements	• HeartStream requested that the solution provide a consolidated account-level view while allowing users to drill down into associated contacts when required. • It was agreed that marketing teams should be able to analyse customers, distributors, hospitals and partner organizations within a unified view. • HeartStream emphasized that global distributors operating across multiple regions must be supported within the future-state customer and partner profile model. • HeartStream confirmed that future marketing activities must support both distributor-led and direct-to-customer business models.
4	Segmentation strategy and market visibility	• HeartStream highlighted the need to segment customers by key market categories such as Hospitals, EMS, Fire, Military and AED Channels • It was requested that future segmentation capabilities also support more granular verticals such as Dental, Schools, Universities, Airports and other end-customer markets. • HeartStream acknowledged that limited visibility currently exists into where distributors ultimately sell products, restricting effective market segmentation and analysis. • It was agreed that additional end-customer data capture and device registration processes may be required to improve future segmentation accuracy.
5	Marketing insight and research sources	• HeartStream confirmed that traditional market research reports have provided limited value and are not currently a primary source of marketing intelligence • HeartStream indicated that customer surveys have not been consistently conducted in recent years but would be valuable to reintroduce as part of future marketing initiatives. • It was highlighted that distributor feedback, sales team input and direct market conversations currently serve as the primary sources of marketing insight.

		• HeartStream confirmed that industry market-share information is received periodically through third-party consolidated reports and could potentially be leveraged for analysis.
6	Customer feedback and survey management	• HeartStream expressed interest in implementing structured customer satisfaction surveys as part of future-state marketing capabilities. • It was suggested that direct customers could receive surveys following product purchase, onboarding or product usage milestones. • HeartStream indicated that customer feedback, complaints and product experience data should be available for future marketing and product planning activities. • UST highlighted that Customer Insights can utilize feedback-related information as an additional source for segmentation and analysis.
7	Marketing data sources and profile enrichment	• HeartStream confirmed that marketing insights may originate from CRM, eCommerce, trade shows, customer feedback systems, sales transactions and distributor-provided information. • It was discussed that future-state profiling should combine multiple sources to create richer customer and partner insights. • HeartStream emphasized the importance of capturing meaningful customer information as early as possible in the customer lifecycle. • It was agreed that improved data capture processes would directly impact the quality of segmentation and marketing outcomes.
8	Customer master data and migration considerations	• HeartStream highlighted concerns regarding duplicate customer records, fragmented account structures and inconsistent customer numbering across existing systems. • It was agreed that customer data cleansing will be critical prior to migration into Dynamics 365. • HeartStream emphasized that poor-quality migrated data could significantly reduce the value of marketing insights and segmentation capabilities. • UST confirmed that data quality, deduplication and account rationalization activities will be important considerations during migration planning.

9	Market segmentation data capture	• HeartStream stressed the importance of capturing market segmentation information at the earliest possible stage of the sales process • It was suggested that sales, quoting and order processes should capture market classifications wherever feasible. • HeartStream noted that market segmentation captured at order entry would provide significantly better marketing intelligence than attempting classification months after product shipment • It was agreed that future-state processes should support improved segmentation data collection across the commercial lifecycle
10	Marketing content governance	• HeartStream confirmed that externally published marketing content currently undergoes approval by Marketing, Quality, Clinical, Legal and Regulatory stakeholders. • It was emphasized that only approved content should be used in customer-facing communications and campaigns. • HeartStream differentiated between formally approved customer-facing content and internal competitive intelligence used for business planning purposes. • It was suggested that future solutions should support appropriate controls around approved and non-approved content usage.
11	MediaValet content management approach	• HeartStream confirmed that MediaValet currently serves as the central repository for approved marketing collateral, images, brochures and related assets. • It was discussed that MediaValet is primarily used for storage, retrieval and sharing of approved content with internal teams and channel partners. • HeartStream requested an assessment of whether Dynamics 365 could complement or replace portions of the current MediaValet functionality. • It was agreed that further evaluation is required before any future-state decisions are made regarding content management architecture.
12	Marketing campaign execution	• HeartStream expressed strong interest in leveraging automated marketing journeys based on customer behavior, purchase history and segmentation criteria. • It was demonstrated that campaigns could be triggered through predefined segments or business events within Dynamics 365.

		• HeartStream acknowledged the value of automated customer outreach for activities such as product awareness, upgrade campaigns and engagement programs. • It was agreed that future campaign capabilities should support distributor-focused as well as direct-customer marketing initiatives.
13	Campaign approvals and governance	• HeartStream clarified that content approvals and campaign approvals are separate processes and should be treated independently. • It was agreed that previously approved content should not require full regulatory review each time it is reused within a campaign. • HeartStream indicated that campaign execution should still be subject to appropriate marketing review and approval controls. • It was noted that campaigns involving promotions, discounts or commercial incentives may require additional finance approval before launch.
14	Marketing performance measurement and reporting	• HeartStream indicated that current campaign reporting capabilities are limited and require improvement in the future-state solution. • It was agreed that marketing performance should be measurable through engagement metrics, landing page activity, click-through rates and conversion indicators • HeartStream highlighted the need to understand campaign effectiveness and its contribution to downstream sales outcomes. • It was discussed that reporting should provide visibility into customer and segment-level trends to support future marketing decisions.
15	Marketing channels and consent management	• HeartStream confirmed that email is expected to be the primary marketing channel during initial rollout phases. • HeartStream expressed interest in supporting additional channels such as SMS, social media and other digital engagement methods in the future. • It was agreed that opt-in, opt-out and communication preference management capabilities are required for future marketing activities.

		• HeartStream confirmed that future marketing processes must comply with applicable privacy and consent management requirements, including GDPR obligations where relevant.
16	Marketing organization and access requirements	• HeartStream confirmed that the marketing organization operates with a relatively small global team compared to the legacy Philips model. • It was agreed that marketing users require broad visibility into customers, install base, sales activity and related business information to support planning and segmentation activities. • HeartStream indicated that only a limited number of users are expected to create and manage campaigns globally. • It was confirmed that appropriate role-based access controls will be required while still enabling global visibility for authorized marketing users.

3 DECISIONS MADE

Sr	Topic	Discussion Summary
1	Marketing stakeholder participation	• It was agreed that future Marketing / Customer Insights workshops should include additional marketing stakeholders, as the current workshop attendance was impacted by confusion around the workshop title and scope.
2	Customer profile approach	• It was agreed that the future-state marketing solution should primarily support account-level visibility while allowing users to drill down into associated contacts when required.
3	Future-state segmentation strategy	• It was agreed that customer and distributor segmentation will be a key capability of the future solution. • Initial focus should be on major market segments such as Hospital, EMS, Fire, Military and AED Channels, with the ability to expand into more granular vertical markets over time.
4	Customer Insights data model	• It was agreed that customer, distributor, partner and direct-consumer information should be considered when defining future Customer Insights profiles and segmentation strategies.
5	Customer survey capability	• HeartStream agreed that customer surveys and feedback collection should form part of the future-state marketing capability to improve customer understanding and insight generation.
6	Marketing content governance	• It was agreed that only approved marketing content should be used in marketing campaigns and customer communications.

		• Existing Legal, Regulatory, Clinical, Quality and Marketing approval processes will continue to govern content approval.
7	Campaign approval model	• It was agreed that content approval and campaign approval are separate processes. • Approved content may be reused in campaigns without repeating full content approval activities, while campaign execution will remain subject to appropriate business approvals.
8	Marketing data visibility	• HeartStream confirmed that authorized marketing users should have visibility to customer, install base, sales and related business information required for segmentation, planning and campaign execution.
9	Consent management approach	• It was agreed that future marketing campaigns must support consent management, opt-in/opt-out capabilities and applicable GDPR/privacy compliance requirements.
10	Marketing channels roadmap	• HeartStream confirmed email as the primary initial marketing channel. • SMS, social media and additional digital engagement channels will be considered as future-state capabilities.
11	Customer data quality and migration	• It was agreed that customer master data cleansing, deduplication and account rationalization activities will be required prior to migration to ensure effective marketing segmentation and reporting.
12	Segmentation data capture	• It was agreed that market segmentation information should be captured as early as possible within the commercial process to support future marketing analytics and reporting needs.

4 RISK AND ISSUES

Issue	Impact	Mitigation	Owner
Limited visibility into distributor end-customer sales and market segments	Marketing segmentation, campaign targeting and market trend analysis may be incomplete due to lack of end-customer visibility.	Evaluate mechanisms to capture end-customer information through distributor reporting, device registration, tracing data and future business process enhancements.	HeartStream Marketing / Sales / UST
Customer and partner master data contains duplicates and	Customer Insights segmentation, reporting and analytics may be	Perform data profiling, cleansing, deduplication and	HeartStream Business / Data Team / UST

fragmented account structures	inaccurate if duplicate records are migrated into Dynamics 365.	account rationalization activities prior to migration.	
Market segmentation data is not consistently captured during sales and order processes	Future marketing analytics and reporting may lack sufficient data to identify market trends and customer segments.	Define mandatory market classification attributes and incorporate them into future sales, opportunity and order management processes.	HeartStream Business / UST CRM
Marketing insight information is spread across multiple teams and repositories	Valuable market intelligence may remain inaccessible, inconsistent or unavailable for marketing analysis and planning.	Establish a centralized repository and governance model for capturing and managing marketing insights.	HeartStream Marketing / UST
Future-state content management approach (MediaValet vs Dynamics 365) remains undecided	Duplicate capabilities, integration complexity or unnecessary tools may be introduced if architecture decisions are delayed.	Assess MediaValet capabilities against Dynamics 365 Marketing requirements and finalize the target content management approach.	HeartStream Marketing / UST Solution Architecture
Customer surveys and structured feedback mechanisms are currently limited	Marketing teams may lack sufficient customer sentiment and market intelligence data to support campaign planning and product decisions.	Define future customer feedback and survey strategy leveraging Dynamics 365 Customer Insights capabilities.	HeartStream Marketing
Marketing campaign approval workflow is not fully defined	Inconsistent campaign governance may result in unauthorized communications or delayed campaign execution.	Define approval workflow covering campaign ownership, review responsibilities and approval hierarchy.	HeartStream Marketing / UST
Consent management approach for future direct-customer marketing requires further definition	Risk of non-compliance with privacy and communication preference requirements across regions.	Define consent capture, opt-in/opt-out processes and integration approach with existing compliance mechanisms.	HeartStream Marketing / Legal / UST
Required marketing stakeholders were not represented in the workshop due to workshop naming and attendance confusion	Certain regional marketing requirements may not have been captured, potentially leading to solution gaps.	Conduct follow-up sessions with broader marketing stakeholder participation and validate captured requirements.	HeartStream Marketing / UST
Reliance on manual tracing reports to identify end-market sales	Marketing insights and segmentation may be delayed by several months, limiting responsiveness to market trends.	Review opportunities to automate tracing updates and improve distributor reporting processes in the future state.	HeartStream Business / UST

Heartstream

5 ACTION ITEMS

Sr	Category	Action	Owner	Tentative Due Date
1	Segmentation	Provide the list of marketing segments and target audiences that HeartStream would like to support in Dynamics 365 Customer Insights, including distributor, customer and market-based segmentation requirements.	HeartStream Marketing	TBD
2	Marketing Data Sources	Share details of current marketing data sources, including trade show lead files, external lead providers and any market intelligence datasets used by the business.	HeartStream Marketing	TBD
3	Analytics Data	Provide a sample of the third-party market-share / industry intelligence reports received by HeartStream for evaluation of potential Customer Insights use cases.	HeartStream Marketing	TBD
4	Customer Insights Design	Assess Customer Insights segmentation and profiling capabilities against HeartStream's distributor, account and end-customer marketing requirements.	UST CRM / Marketing Team	TBD
5	Customer Surveys	Define future-state customer satisfaction and feedback survey requirements, including target audience, timing and expected reporting requirements.	HeartStream Marketing	TBD
6	Data & Migration	Analyze customer master data quality, duplicate account scenarios and market segmentation attributes required to support future marketing initiatives.	HeartStream Business / UST Data Team	TBD
7	Market Classification	Review how market categories (Hospital, EMS, Fire, Military, AED Channels, Dental, Schools, etc.) can be captured within the opportunity, order and customer lifecycle processes.	UST CRM / HeartStream Business	TBD
8	Content Management	Conduct a detailed review of MediaValet capabilities and compare them against Dynamics 365 Customer Insights content management and asset library capabilities.	UST Solution Architecture	TBD
9	MediaValet Assessment	Arrange a walkthrough/demo of MediaValet and explain current business usage, content governance and partner-sharing capabilities.	HeartStream (Lynn Baker)	TBD
10	Marketing Governance	Define future-state campaign approval workflow, including marketing, finance and other stakeholder approvals required prior to campaign execution.	HeartStream Marketing	TBD
11	Consent Management	Provide details of the current consent management approach, including TrustArc usage and any regional privacy compliance requirements.	HeartStream Marketing / Compliance Team	TBD
12	Reporting & KPIs	Define marketing KPIs, campaign success measures, conversion metrics and reporting requirements expected from Dynamics 365 Marketing.	HeartStream Marketing	TBD
13	Data Visibility	Confirm marketing user access requirements, including visibility to customer, distributor, sales, install-base and related business information.	HeartStream Marketing	TBD
14	Campaign Channels	Define future marketing channel requirements beyond email, including SMS, social media and other digital engagement channels.	HeartStream Marketing	TBD

15	Future Workshop Coverage	Identify additional marketing stakeholders from global and regional teams who should participate in future marketing workshops.	HeartStream Marketing	TBD
16	Requirement Validation	Review workshop findings, assumptions and discussion outcomes and provide feedback or corrections where required.	HeartStream Business	TBD
